Excellent Performance

Microfluidic Design

Liquid phase reaction system, antigen-antibody react more fully, get accurate results.

Freeze-Dried Technic

The reagent is freeze-dried into microspheres, which can be stored and transported at room temperature (2-30°C).

Time resolved fluorescence immunoassay (TRFIA)

TRFIA uses Lanthanides (Eu 3+) as markers. Eu 3+ has wider Stokes shift and long fluorescence lifetime. It can effectively reduce the interferences from background fluorescence.

Calibration and QC management

Calibration and double QC management, ensures the reliability of patients' reports.

High Efficiency

LYOFIA® Platform is very easy to use, the results can be reported in 5-15 minutes within just 3 steps.

Step 1 Add Sample

Step 2 Insert cassette
